

STEPS to Convert Your ASAP-UFT script into Ginger

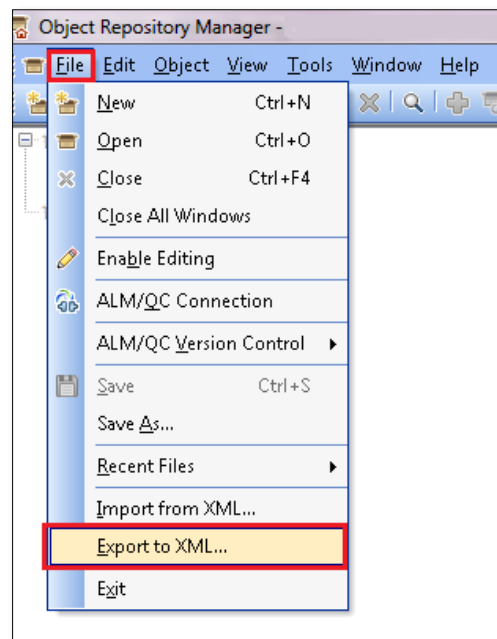

1. Convert your UFT Object Repository into XML –

a) Open the Object Repository Manager from UFT.

b) Open your Project Shared Repository in the OR Manager

c) From File>>Export to XML. Save it to a path on your local machine.

2. Provide the Path of this XML in the Import from ASAP UFT dialogue box -

Import from ASAP

* UFT Object Repository (Xml Based) :

Browse

* ASAP GUI File :

Browse

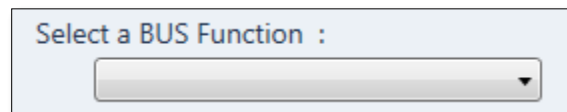

* ASAP BUS File :

Browse

* CALENDAR Path :

Browse

3. Similarly, provide the path of your BUS and GUI files using Browse button. You can input the .txt / .qfl versions of your BUS/GUI files.
4. Also, Provide the path of the ASAP calendar being used in the script.
5. Once Correct path for Calendar is mapped using Browse button, the BUS function drop down is populated with all the BUS functions used in the Calendar

Select a BUS Function :

6. Click on  to load the grid with all the GUI functions being used in the BUS function selected in Step 5. Also a Business Flow name is auto populated depending on the name of Bus Function selected.

7. Next, Click on  to convert the GUI functions script to GINGER actions/Activity. Note that Each Gui function is mapped to an Activity in Ginger, while operations being performed are converted into Ginger Actions.

8. Finally, Click on  to save your Business Flow.
